

Top 10 Reasons Why

Hitachi Solutions for SAP HANA

Unlock Insights With Modern SAP HANA Platform

Maximize SAP HANA® ROI with modern IT infrastructure. Unlock rapid insights, cut costs and boost resilience to drive innovation and stay competitive.

1. Ensure Seamless SAP HANA Growth, Maximum Efficiency

Hitachi delivers unmatched scalability and reliability — supporting up to 33 million IOPS and 69PB per Hitachi Virtual Storage Platform (VSP) high-end systems, and can power up to 500 SAP HANA nodes.

2. Transform and Protect SAP With Trusted Resiliency

Accelerate SAP performance with VSP One Block — trusted globally for 100% data availability, scalable infrastructure, resilient architecture and consistently high throughput for demanding enterprise workloads.

3. Employ Flexible Infrastructure for Growth

Flexible configurations deliver right-sized infrastructure, unifying dev, test and production. Solution supports scalable SAP HANA from 2 to 16 sockets with Eviden®, via appliance or tailored data center integration.

4. Lower Costs, Simplify SAP

Consolidate your SAP HANA environment and easily integrate compute and storage across regions, streamline management and scale as needed to support business growth without overspending.

5. Enable Eco-Friendly, Sustainable Storage

Cut energy use and carbon footprint by up to 40% — without sacrificing performance. VSP One Block delivers top IOPS per watt with patented, ENERGY STAR®-recognized, energy-efficient technology.

6. Maximize SAP Efficiency With Precision-Sized Infrastructure

Tailored infrastructure sizing — backed by hundreds of successful global deployments — ensures optimal alignment with SAP Tailored Datacenter Integration (TDI) requirements across both greenfield and brownfield environments.

7. Support 24/7 Availability and Ensure Fast Recovery for SAP HANA

Ensure 24/7 SAP HANA availability with scale-out disaster recovery. Protect your data center and cut costs using Hitachi data protection resources for failover production and quality assurance.

8. Modernize SAP HANA With Certified, High-Performance Infrastructure

Accelerate SAP HANA transformation with Hitachi certified infrastructure and services. VSP One, SSDs and virtualization support appliance and TDI models — delivering reliable, high-performance solutions that simplify operations and boost agility.

9. Accelerate App Development With Cloud-Ready Data

Hitachi's VSP One SDS enables seamless AWS® replication for rapid test/dev provisioning. Integrated snapshots provide instant, consistent data access — accelerating development while ensuring enterprise-grade reliability and scalability.

10. Accelerate SAP HANA Operations With Thin Image Technology

Quickly create ransomware-protected immutable snapshots for decision support, testing and data protection with Hitachi Thin Image Advanced for Hitachi Virtual Storage Platform and VSP One storage arrays.

Maximize Your SAP HANA Returns
