Hitachi Vantara

*Top 10 Reasons Why*

Hitachi Data Lakehouse
TRUST Built In. VALUE Proven Out.

Hitachi Data Lakehouse starts with a simple idea: one foundation for all your data, designed to earn your immediate trust. Store data once, apply consistent governance with full visibility and lineage, and analyze it in place for analytics, AI and faster decisions. Here's why trust delivers value:

1. **Trusted by Design**
Unified foundation supports all data types and workloads — file, object, block, structured, unstructured and streaming — no silos or "bolt-ons."

2. **Real-Time Insight**
Querying data directly where it lives eliminates the need for duplication or complex ETL pipelines.

3. **Unified Access**
Analytics and AI run across distributed sources in real time, without moving data.

4. **Smart Optimization**
Intelligent lifecycle management aligns data placement with performance, cost and sustainability goals.

5. **Transparent Governance**
Built-in lineage, sensitivity tracking and policy enforcement deliver transparency and audit readiness.

6. **Verified Resilience**
100% data availability, 4:1 effective capacity and verified cyber resilience are backed by solid guarantees.

7. **AI-Ready Architecture**
Low-latency data paths enable faster model training, real-time inference and scalable parallel workloads.

8. **Locked-In Compliance**
Immutable retention, automated policies and continuous visibility support the world's most demanding regulations.

9. **Unified Simplicity**
Consolidating analytics, governance and protection under one modern platform reduces complexity and cost.

10. **Enterprise-Proven**
More than a century of engineering and data innovation delivers sustainable, enterprise-grade trust at scale.

Analyze data in place with consistent governance and control.
