Top 7 Reasons to Choose Data Protection as a Service from Hitachi Vantara (DPaaS)

1. End-to-end, unified approach
2. Self-managed or fully supported
3. Predesigned and architected
4. Array of service classes tailored to meet your needs
5. Speed time to deploy
6. Flexible Subscription Model
7. Pay-as-you-go, OPEX data protection for hybrid cloud environments

End-to-end, unified approach
Data Protection as a Service from Hitachi Vantara (DPaaS) offers a complete data protection and cyber resiliency offering that minimizes complexity while providing low latency. Near-zero backup windows, significantly improved recovery point objectives (RPOs) and recovery time objectives (RTOs) stay firmly in place with local SLAs, assuring your business stays operational come what may.

Self-managed or fully supported
DPaaS provides management at a level that suits your needs. Choose fully automated management or a fully self-managed solution with a comprehensive range of services such as advanced cloud-based analytics, monitoring and reporting.

Predesigned and architected
DPaaS Comes with a predesigned and pre-tested solution that meets your unique requirements. This means that instead of spending time building your data protection and cyber resiliency solution, it can be implemented fully ready to meet your needs and rigorous service level agreements (SLAs) and other requirements.

Array of service classes tailored to meet your needs
The self-service catalog of service classes matches the criticality of your data, required RTOs and RPOs, and your business needs. This approach ensures that the data protection needs of your business are met. Options to customize are always available when needed.

Speed time to deploy
Gain deployment efficiency through pre-tested and pre-architected design. This means that instead of spending time building your data protection and cyber resiliency solution, it can be implemented fully ready to meet your needs and rigorous service level agreements (SLAs) and other requirements.

Flexible Subscription Model
Reduce your costs by only paying for the data protection that you actually use. DPaaS enables subscription-based payments, reducing your costs and improving your ability to plan. Billing is monthly, based on the amount of data protected within each service class and options selected.

Availability
100% data availability guarantee for Enterprise and Commercial VSP portfolio-based solutions.

DPSaaS provides management at a level that suits your needs. Choose fully automated management or a fully self-managed solution with a comprehensive range of services such as advanced cloud-based analytics, monitoring and reporting.
