

# Top Advantages of Hitachi Unified Compute Platform 2000 Converged Infrastructure

## CHECKLIST

Is your organization under pressure to deliver new digital applications on an ever-shorter time scale, with a shrinking budget and fewer staff? Hitachi Unified Compute Platform 2000 (UCP 2000) lowers operational costs and delivers cloud-like agility with improved efficiency and simplified manageability, to accelerate digital transformation.

## Rapid Deployment

Make your data center productive faster with easier planning, procuring, installation and management.

**Look for a converged solution based on simple pretested building blocks.**

## Simplified Management

A single, intuitive interface integrates management, orchestration and automation for the entire converged stack, eliminating the need for multiple tools and complex processes.

**The aim of a converged solution is to require less time to “keep the lights on,” freeing resources to meet strategic business requirements.**

## Flexible Configuration

UCP 2000 compute and storage components scale independently to eliminate overprovisioning. Hardware is flexibly configured, and environment options include VMware, Microsoft and Open Stack, as well as containers and even “bare metal,” to run any application workload at any scale.

**Look for a system that adapts to your specific workload requirements, so your budget is used for only what you need, and nothing you don't.**

## Cloud-Like Agility

Dynamically scale and flexibly reconfigure both virtual and physical environments to meet the needs of a wide range of use cases and applications. Add new hardware without downtime, and configure virtual machines in minutes to respond to any new workload demand.

**Today's digital business changes faster and is more demanding than in the past. Choose a converged system that is adaptable and responsive, to run transformational "systems of innovation."**

## Easy Growth

Start small, and easily scale to keep up with business demands that grow and change. As you grow, sophisticated management and automation tools monitor every aspect of your environment to guide your investment decision.

**Choose a platform that makes managing a growing environment as simple as your initial deployment.**

## Single-Vendor Support

Receive all-in-one support for the entire converged stack, including hardware and software, eliminating handoffs and miscommunication between component vendors.

**Deal with one vendor for everything, to streamline the support process and resolve issues faster.**

**Learn how UCP 2000 converged solutions from Hitachi Data Systems offer these advantages and more, to quickly improve the performance and management of your infrastructure.**
