

## Hitachi Data Instance Director (HDID) Support Matrix: Storage Based, Storage

### Storage Device Support

The following matrices apply to both physical servers and virtual machines with physical raw device mapping (for VMware) or pass-through disks (for Microsoft® Hyper-V®). In the case of virtual machines, an agent must be installed on the virtual machine.

The exception is that Hitachi storage (hardware path) has no host dependencies and therefore applies to any host type supported by the storage device.
