Modernize Cloud With Hyperconverged Infrastructure

The top 5 considerations from HCI customers and analysts

You probably know by now that Hyperconverged Infrastructure (HCI) is the next critical milestone in your IT roadmap.

By consolidating compute, storage and networking into a single software-defined system, HCI promises lower costs, simplified IT management and agile storage performance. But did you know that not all HCI solutions are the same?

Here are the top five considerations for enterprises and mid-sized businesses who are about to choose an HCI solution – and why you should talk to Hitachi first.

1. Speed of Deployment

Did you know that Hitachi HCI customers accelerate time to production by up to 80%? Enable new product releases at the speed of the cloud with automated infrastructure deployment that enhances certainty and minimizes risk.

2. Cost Savings

3. Simplified Management

4. Scalable Flexibility

5. Smart Acquisition

With UCP Advisor, we can reduce the time it takes to provision a new physical server down to just seven or eight minutes. Those time-savings mean we're able to scale without adding a single new member to our team. Even today, we have just five people managing the entire estate: that’s more than 4,000 servers per person!"
